

Project development process and dissemination activities since start of the project are summarized followingly.

Until the end of 2020, following activities have been carried out:

- Infrastructure on-site was prepared and permits were acquired to start construction phase of the pilot plant
- Construction phase started and is in full progress
- Internal team workshops were held to define the vision and future strategy of Waste2Protein
- Economic opportunities for Waste2Protein technology at the European level were evaluated and meetings with potential customers, business holders and shareholders took place to define replication transfer strategies
- Test runs started, and comprehensive data was collected to optimize processes, modules and output of the plant
- Dissemination plan was developed and is continuously updated increasing visibility of project

Dissemination Events
