

Until the middle of 2021, following activities have been carried out:

- Construction phase ended successfully and scaling up of production amount is in full progress, capacity of plant operation continuously increasing too
- Each module is finished and currently in scaling up and optimisation process
- Several team workshops were held to enhance internal working processes
- Economic opportunities for Waste2Protein technology at the international level were evaluated
- Waste2Protein technology receives international attention and funding via EU Dealflow
- Business opportunities for products were evaluated, contact to stakeholders and buyers were established
- Replication and transfer strategy is in progress to define following plants
